PROFESSIONAL SUMMARY

Software Engineer with commercial experience building production FinTech, mobility, and blockchain-enabled applications using React Native, Next.js, TypeScript, JavaScript, and REST APIs. Progressed from Software Development Intern to Junior Software Developer at ElementPay, contributing to payment infrastructure, blockchain integrations, transaction management, analytics dashboards, responsive mobile applications, and internal administration systems.

Experienced delivering client solutions from concept to deployment, including AI-powered marketplaces and digital investment platforms, alongside full-stack personal projects that solve real-world problems in finance, education, and workplace productivity. Passionate about building scalable software that improves user experience and solves meaningful business challenges.

EDUCATION

Bachelor of Business Information Technology

December 2025

Technical University of Mombasa

Relevant Coursework: Database Systems, Networking & Configuration, Information Security, Software Engineering, Systems Analysis & Design, Operating Systems, Web Development, IT User Support

PROFESSIONAL EXPERIENCE

ElementPay

Junior Software Developer

April 2026 – Present

- Developed production features using React Native, Expo, TypeScript and REST APIs.
- Built payment workflows including bank payouts, refund management and transaction validation.
- Implemented blockchain-enabled liquidity validation and multi-chain wallet functionality to improve payment reliability.
- Enhanced transaction management with advanced filtering, pagination, analytics and reporting.
- Built responsive admin dashboards for monitoring users, transactions and operational metrics.
- Integrated backend APIs and collaborated closely with backend engineers throughout feature development.
- Improved wallet management, blockchain balance visibility and payment user experience.
- Implemented role-based access control and administrative functionality.
- Delivered numerous production bug fixes and UI improvements across mobile and web applications.
- Participated in Agile sprint planning, code reviews and Git-based collaborative development.

Software Development Intern

October 2025 – March 2026

- Built frontend features under mentorship while learning enterprise software development.
- Tested APIs using Postman and validated backend integrations.
- Worked on transaction dashboards, analytics, responsive interfaces and pagination.
- Investigated production bugs and implemented fixes across multiple application modules.
- Collaborated with senior developers through pull requests and code reviews.

FEATURED ENGINEERING PROJECTS

Daltoma Capital AM (Client)

White-Label Alternative Investment Platform

Designed and implemented a mobile-first digital investment platform that modernizes how alternative investment funds onboard, manage and communicate with investors, replacing paper-based processes with secure digital onboarding, portfolio management and document access.

Problem: Alternative investment funds often rely on manual onboarding, paper documentation and fragmented communication, creating slow and inefficient investor experiences.

Solution: Configurable investor platform featuring an investor dashboard, digital KYC document management, deposit and withdrawal workflows, invite-only onboarding, secure document center, white-label branding architecture and responsive mobile-first design.

Impact: Created infrastructure allowing multiple investment funds to launch branded investor portals from a shared codebase, reducing operational overhead while improving investor accessibility.

Tech: Next.js, TypeScript, Tailwind CSS, Vercel

Inakaso (Client)

AI-Powered Second-Hand Fashion Marketplace

Developed a marketplace that uses AI to transform individual clothing listings into complete styled outfits, making second-hand shopping easier and more engaging.

Problem: Second-hand shoppers often struggle to visualize how individual clothing items work together, leading to lower buyer confidence and reduced sales.

Solution: AI-first platform where sellers upload individual garments, AI generates complete outfit combinations, buyers browse curated looks instead of isolated products, and individual pieces or complete outfits can be purchased.

Impact: Improves product discovery, encourages sustainable fashion and increases purchase confidence through AI-assisted styling.

Tech: Next.js, TypeScript, AI Integration, Responsive Design

EcoLogic

Educational Ecology Learning Game

Designed and developed an educational browser game that teaches ecological concepts through interactive gameplay.

Problem: Traditional environmental education often relies on passive learning methods that struggle to maintain learner engagement.

Solution: Browser game featuring drag-and-drop learning, food chain challenges, progressive difficulty, achievement badges, leaderboards, daily challenges, species collection and randomized gameplay.

Impact: Encourages active learning while improving environmental awareness through engaging educational experiences.

Tech: JavaScript, HTML, CSS

FinTrack

Personal Finance Analytics Dashboard

Built a finance dashboard that helps users analyze transactions through interactive filtering and visualization.

Problem: Managing large transaction histories becomes difficult without efficient search, categorization and reporting tools.

Solution: Real-time search, transaction filtering, sorting, pagination, SVG analytics charts, CSV export and debounced search.

Impact: Enables users to gain faster financial insights and manage personal transactions more effectively.

Tech: JavaScript (ES Modules), HTML, CSS, Fetch API

Gamified Employee Task Management System

Full-Stack Productivity Platform

Developed a multi-user employee task management system as a final-year university project.

Problem: Traditional task management systems often lack motivation mechanisms and provide limited visibility into employee productivity.

Solution: Role-based access control, task assignment, attendance tracking, clock-in/clock-out, XP points, achievement badges, productivity dashboards, REST APIs and secure authentication.

Impact: Improves accountability, increases employee engagement through gamification and provides managers with real-time productivity insights.

Tech: PHP, MySQL, JavaScript, HTML, CSS

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, PHP, Python, SQL, HTML5, CSS3

Frontend: React, React Native, Expo, Next.js, Tailwind CSS, Responsive Design

Backend: REST APIs, MySQL, Authentication, Session Management, API Integration

Blockchain & FinTech: Web3, viem, ERC-20, Wallet Integration, Multi-chain Applications, Blockchain RPC, Smart Contract Reads

Tools: Git, GitHub, Postman, Vercel, Figma, VS Code

Development Practices: Agile, Debugging, Testing, Code Reviews, Responsive Design, UI/UX Implementation

SELECTED PROFESSIONAL HIGHLIGHTS

- Progressed from Software Development Intern to Junior Software Developer within six months.
- Delivered production software across FinTech, blockchain and mobility platforms.
- Built customer-facing products alongside internal operational dashboards.
- Developed blockchain-enabled payment validation and multi-chain wallet functionality.
- Designed AI-powered and investment technology solutions for real-world business challenges.
- Experienced collaborating within Agile teams using Git-based workflows and peer code reviews.
